Non-Invasive Cosmetic Recovery

by jennifer patrick

WHAT IS ELASTIN INFUSION THERAPY?

Dr. Ensley was invited to participate in a regenerative study by the U.S. Department of Defense to help wounded soldiers in Iraq.

He discovered a new genetically-engineered protein developed from plants, promoting scar-less healing. Used in cosmeceutical, preliminary studies conducted by Steve Lamb, M.D., it showed a 45 percent reduction in wrinkles.

TBI's protocol uses a higher level of potency to replace lost elastin more dramatically.

WHAT IS MICROCURRENT?

Microcurrent is a modality that mimics the body's own chemical electrical signals at a cellular level, "recharging" the cells and resulting in the toning of muscles while producing more collagen and elastin.

TBI offers unique treatments that address the three critical areas of aging: the loss of collagen, elastin and muscle tone. Unlike chemical peels or microdermabrasion that can damage the skin or injections such as Botox, impressive results are obtained in a painless, safe and natural healing solution.

In 2004, Nelson Thibodeaux, TBI president, obtained his first line of skincare products. He also became interested in Microcurrent, a safe procedure with the ability to dramatically improve wrinkles and sagging skin. The idea of combining the two launched TBI: Research of Non-Invasive Cosmetic Recovery.

In 2007, he received a registered trademark on a new Microcurrent, Chiro950®, and was invited to speak with doctors at Logan College in St. Louis. In his 2008 collaboration with microbiologist, Dr. Burt Ensley, TBI developed the protocol, Iontophoresis Elastin Infusion Therapy™, painlessly replacing lost elasticity in the skin. TBI has trained and certified technicians in offices of chiropractors,

medical doctors, licensed massage therapists and estheticians in 29 states with more than 100 locations now using TBI products and procedures.

Certified technicians will now offer face and body sessions at TBI's training center in Colleyville. "If you do not see visible results with the first treatment, it's free," said Nelson. 

Call TBI at **817-688-3636** to schedule your free consultation.

TBI is located at 1900 Industrial Blvd., Suite 200, Colleyville.
